

ABSTRACT OF THE INVENTION

The present invention is directed to a method and system for use in a computing environment for managing input information. The system for facilitating input management in a computerized environment may include an input manager for processing events received from an input provider. The system may additionally include a staging area including a stack of events created by the input manager. The staging area allows access by external components. The external components may include a set of filters capable of accessing and manipulating the stack of input events and a set of monitors capable of monitoring manipulation of the stack of events.
